

SERIE PMG • STEEL POSTS

These comprise a compact range of galvanized-steel posts for applications in jetty, harbour or dock marking.

Suitable for the installation of our complete range of flashing beacons, both solar powered or powered by electrical network.

Features

- Simple tubular post, cost effective structure.
- Standard post height up to 8 m. Greater heights on customer request. Optional portable design for the smallest size.
- Models exceeding 5 m height are equipped with top service platform.
- Constructed in hot-dip galvanized steel.
- The post is supplied complete, with all assembling and anchoring bolts.
- Ideal as emergency or temporary light in port or harbour areas, floating pontoons, etc.
- Also, available compact self-contained solar powered lantern, complete with solar panel and battery.
- Alternative primary batteries pack.
- Top mark and wing-type day marks available.
- Red, green, yellow, black and white colours according to IALA Recommendations. Other colours also available.
